

PRANAV REDDY GADDAM

San Jose, CA | +1 (925) 605-9293 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | reddy.pranav.gaddam@gmail.com

PROFILE

Software Engineer skilled in building scalable full-stack and AI-driven systems, with strengths in backend architecture and real-time data/model processing. Experienced in delivering reliable, user-focused applications using cloud-native workflows and modern engineering practices. Proficient with **React**, **TypeScript**, **FastAPI**, **PyTorch**, and end-to-end deployment of high-performance web and ML solutions.

SKILLS AND CERTIFICATIONS:

- **Languages:** JavaScript, HTML, CSS, TypeScript, Python, SQL
- **Tools:** Docker, Kubernetes, MongoDB, PostgreSQL, Git, Jest, pytest, Jenkins
- **Technologies/Frameworks:** React.js, Next.js, FastAPI, Responsive Design, AWS, GraphQL, REST APIs
- **Achievements:** Winner, SpartUp Spring Hackathon 2025, hosted by **Cisco** and **SJSU**
- **Certifications:** AWS Certified Cloud Practitioner, AWS Certified AI Practitioner

EXPERIENCE

Software Engineer (Data) | VE Projects Pvt Ltd

Aug 2023 – Jul 2024

- Implemented Oracle to Amazon Redshift migration using **Python** and **SQL** in agile teams, improving system performance by 12% and achieving **\$12,000** annual cost savings.
- Built real-time data processing applications handling 15M+ daily records using **Apache Kafka**, PySpark, and cloud infrastructure, participating in code reviews to reduce manual intervention by 29%.
- Developed automated quality validation systems using Python, SQL, and Apache Airflow with **Git** and CI/CD workflows, improving data accuracy by **60%** and accelerating BI reports by 3x.

PROJECTS

Advanced Explainable AI Toolkit | [Link](#)

Aug 2025 – May 2026

- Engineered a modular data extraction pipeline processing explanations from 5+ AI model architectures (transformers, CNNs, tree-based) using Python, SHAP, LIME, and **PyTorch**, achieving **<30s** processing time for 7B parameter models.
- Integrated RESTful API with plugin architecture supporting chain-of-thought reasoning extraction, attention mechanism analysis, and feature attribution standardization across **GPT**, **BERT**, and scikit-learn models.
- Designed comprehensive data schemas and validation pipelines with **90%+** test coverage, enabling seamless integration with downstream visualization tools and enterprise MLOps workflows.

GitBridge: GitHub Repos into Diagrams, Podcasts, and Conversations | [Link](#)

Jul 2025 – Aug 2025

- Engineered an AI platform processing **3GB+** repositories with diagram generation in **<6s** using Mermaid.js and podcast creation in **<3 minutes** with real-time streaming, using ElevenLabs.
- Optimized conversational AI using Qwen-32B LLM with **sub-200ms** response latency, enabling real-time developer interactions with complex codebases and commit histories.
- Developed a full-stack system using **FastAPI** and **Vite.js** + **TailwindCSS**, deployed via Docker on AWS EC2, concurrent processing capabilities.

Hirely: AI-Powered Interview Analysis Platform | [Link](#)

Oct 2025 – Nov 2025

- Built a real-time interview analysis engine using 8+ Computer Vision models (30 FPS) to compute **50+** behavioral metrics with **95%+ accuracy**, boosting candidate insight quality.
- Integrated Claude, Groq, Deepgram, ChromaDB, and real-time job scraping to deliver **role-specific questions** and cut interview prep time by **60%**.
- Delivered a production-ready FastAPI + React platform (20+ endpoints, WebSockets, Supabase, S3) processing **1,800+ frames/min** and generating automated coaching reports.

Pitch-Perfect: Cricket Shot Analysis System | [Link](#)

Oct 2025 – Nov 2025

- Designed a FastAPI + **TensorFlow** system running an **EfficientNet-B0** + **BiLSTM** model to analyze 8-frame clips, classify four cricket shot types, and evaluate form quality with real-time confidence scoring across live and upload workflows.
- Built the complete inference pipeline with **OpenCV** frame parsing, preprocessing, and async **Keras** serving, delivered through REST endpoints (/health, /model-status, /predict, /predict-live) optimized for low-latency predictions.
- Strengthened internal reliability by integrating client-side health checks, model-status validation, and API guards, ensuring consistent readiness and feedback behavior prior to external release.

EDUCATION

San Jose State University | M.S., Data Analytics | **CGPA 3.8/4.0**

Aug 2024 - May 2026

- **Coursework:** Big Data, Machine Learning, Data Warehouse & Pipeline, Distributed Systems

St. Martin's Engineering College | B. Tech in Computer Science and Engineering

Aug 2019 - May 2023

- **Coursework:** Database Management Systems, Distributed Systems, Data Structures and Algorithms

LEADERSHIP AND INVOLVEMENT

IT Leader, Indian Student Organization SJSU

Aug 2025 – May 2026

- Designed, built, and deployed a scalable ticketing and payment system for ISO SJSU, handling **1,500** attendees, streamlining event operations with automated QR-based check-ins, and contributing **\$20,000+** in revenue toward organizing the event.

Director, Technology Awareness Month SMEC

Sep 2021 – May 2023

- Led the month-long initiative, organizing workshops, tech talks, and hands-on sessions that introduced students to emerging technologies and global industry trends, driving large-scale engagement across the institution for **700+** students.
